Adobe Photoshop: The Professional Photo Editing Software is the industry standard for working with images. It is used by artists, designers, photo editors, web designers, graphic designers, and many other

professionals.

Photographers use it to retouch images and make them look their best, or to create brand new images from scratch. Adobe

Photoshop Elements: This is the beginner's version of Photoshop. It is an essential photo editing software for novice photographers, hobbyists, and web designers. It provides a simplified and easier to use experience of the full

Photoshop editing features. More Recommended for You Adobe Photoshop has an awesome range of features you can access from any computer with a web browser. This means you can access your Photoshop from any computer. To access it you'll need to have a paid subscription for an Adobe Creative Cloud subscription, though. Adobe Photoshop Elements requires a

Windows operating system. It can be downloaded from the Adobe website for free. The subscription is a one-time fee of \$9.99 for each computer. Thanks to Shutterstock How to use Photoshop Elements When you first open Photoshop Elements, you'll be greeted with a three-step tutorial. You'll be introduced to the tools, layers, brushes, and more. There are also tutorials on how to create a

new image and how to make it print-ready. Step 1: Open Photoshop Elements Start Photoshop Elements from the Desktop. You should see the Elements splash screen. As soon as you open the program, click on the step you want to start the tutorial. Step 2: The Basics There is a very basic tutorial that gives an introduction to the program. You'll learn the basic ways to edit your

1. Field of the Invention The present invention relates generally to a synthetic resin powder for an organic electroluminescence (EL) display and, more particularly, to a synthetic resin powder for an organic EL display which exhibits uniform particle diameters and the like after the synthetic resin powder is processed into an organic

EL display by melt granulating the synthetic resin powder. 2. Description of the Related Art An organic EL element includes a light emitting layer interposed between a positive electrode and a negative electrode. In recent years, organic EL display devices have drawn attention as next-generation display devices because of their thin profile, high-speed

response speed, wide viewing angle, and full-color capabilities. Organic EL displays can be roughly classified into an inorganic EL display including an EL element which is formed by disposing an inorganic layer serving as a light emitting layer on a substrate, and an organic EL display which includes an organic EL element having an EL layer formed by laminating an organic layer and a positive

electrode layer on a substrate. However, when an inorganic layer is used for an EL element, a relatively high temperature, e.g., about 300° C., is necessary for forming the inorganic layer on the substrate. Additionally, in order to form a film composed of a conductive material on the substrate, it is necessary to use a vacuum deposition method or sputtering, requiring high

equipment investment. Furthermore, the vacuum deposition method is difficult to form a light emitting layer composed of an inorganic material having high heat resistance and, therefore, the vacuum deposition method is not useful for commercialization.

Therefore, an organic EL display which can be driven at a low voltage, by using an organic layer which is

formed by using an ink jet method, is attracting a lot of attention. An example of an organic EL display which can be driven by an organic EL element using an organic layer formed by using an ink jet method is disclosed in Patent Literature 1. A general organic EL display device of Patent Literature 1 is described with reference to FIG. 1 of the attached drawings. FIG. 1 is an

exploded perspective view of a first organic EL display device according to Patent Literature 1. The first organic EL display device includes a first substrate 102 having a plurality of light emitting cells 101 and a plurality of first lead terminals 103 connected to the light emitting cells 101, a second substrate 104 having a plurality of second lead terminals 105 connected to the first lead

terminals 103, a sealing
